CE474 " Structural Analysis II The three distinct structures in the virtual systems we will consider are: a) a propped cantilever identical to the real structure (statically indeterminate to 1st degree). b) a simplified structure with moment constraint at A released. This is a simply supported beam.

Structural Analysis IV 4 Dr. C. Caprani Virtual Forces A virtual force is a force imagined to be applied and is then moved through the actual deformations of the body, thus causing virtual work.

Virtual Work " Combined Structures 4th Year Structural

Structural analysis can be addressed using three main approaches [9]: a) tensor formulations (Newtonian mechanics and vector), b) formulations based on the principles of virtual work, c) formulations based on classical mechanics [10].
